

K SNARE-O

LEVEL 1

Benefits

Easy

Fundamental Combo Sound

Control

Middle Back of the Tongue

Steps

1

Make the 'K' sound with a quick burst of air

Problems & solutions

1

Making the K without breath

Not wrong, but might be limiting. Try 'breathing' out the sound instead of just using your tongue muscles

2

Too much air

Keep the back of your tongue closer to the roof of your mouth to 'squeeze' the air. Be efficient!

Direction

Learn both the breath and breathless K snare so you can play around with combos a lot easier in the future

You would wanna learn the inward clutch snare to get even more texture and breath control

Pro Tips

Rapid snare
Repeat the K's with a long breath while using the back of your tongue to 'slice' the air, making a rapid K sound

Inward
Do the sound inward. You can also make an out-in snare combo (helps with breath)

Change the Vowels
KO to KA to Ki
